```
Entrées : une expression booléenne t
Sorties : sommet u tel que f_u = t

build(t) :

| build'(t, i) :
| si t = faux alors
| retourner 0
| sinon si t = vrai alors
| retourner 1
| sinon
| v_0 \leftarrow \text{build'}(t[0/x_i], i+1)
| v_1 \leftarrow \text{build'}(t[1/x_i], i+1)
| retourner make(x_i, x_0, x_1)
| retourner build'(t, t)
